

WHAT IS METHODOLOGY ?

Lecture

09-03-2022

Prof. A.A. Bogatyrev

WHAT IS METHODOLOGY ?

Methodology [ˌmɛθəˈdɒlədʒɪ] , -gies is

- 1) the system of methods and principles used in a particular discipline, in some particular area of study or activity.
- 2) the branch of philosophy concerned with the science of method and procedure.

Prof. A.A. Bogatyrev

WHAT IS METHOD?

Method ['meθəd]

is a particular procedure for accomplishing or approaching something, especially a systematic or established one.

via Latin from **Greek methodos** 'pursuit of knowledge', from meta- (expressing development) + hodos 'way'

Prof. A.A. Bogatyrev

WHAT IS METHOD LIKE?

Distributive Analysis is a method of linguistic research in which the classification of linguistic units and the study of their features are carried out on the basis of the distribution of the units in question in the spoken chain—that is, on the basis of their *combinability* with other units, which are called the *environment*, or context, of the units in question. Distributive analysis was devised by representatives of so-called descriptive linguistics.

The Great Soviet Encyclopedia, 3rd Edition (1970-1979). © 2010

Prof. A.A. Bogatyrev

What is method description like?

The **distribution** of a unit is the sum total of all its environments.

The environment of a unit may be either “right” or “left”.

There are **three main types of distribution** :

- 1) **contrastive**;
- 2) **non-contrastive**;
- 3) **complementary**.

Prof. A.A. Bogatyrev

What is method description like?

The **distributional analysis** is used to fix and study the units of language in relation to their contextual environments, i. e. adjoining elements in the text.

The study is conducted in **two stages**.

At the first stage, the analyzed text is divided into *recurrent segments* consisting of phonemes. These segments are called “**morphs**”.

At the second stage, the environmental features of the morphs are established and the corresponding identifications are effected.

Prof. A.A. Bogatyrev

What is method description like?

Contrastive and non-contrastive distribution concern identical environments of different morphs.

The morphs are said to be **in contrastive distribution** if *their meanings are different*.

Such morphs constitute *different morphemes* (eg. play-**ed**, play-**ing**).

What is method description like?

Contrastive and non-contrastive distribution concern identical environments of different morphs.

The morphs are said to be in **noncontrastive distribution** *if their meaning is the same*.

Such morphs constitute “free alternants”, or “free variants” of the same morpheme (eg. burn-**ed**, burn-**t**).

Prof. A.A. Bogatyrev

What is method description like?

Complementary distribution concerns *different environments of formally different morphs which are united by the same meaning*.

If two or more morphs have *the same meaning* and the difference in their form is *explained by different environments*, these morphs are said to be in complementary distribution and considered the *allomorphs* of the same morpheme (eg. Desks **-s**/, girls **-z**/, glasses **-iz**/).

Prof. A.A. Bogatyrev

What is method description like?

Method application restrictions

The Distributional Analysis is a good example of finding relevant interrelation between linguistic syntagmatic and paradigmatic structures, such as meaning and word structure. The transfer of distribution analysis to other levels or areas of linguistic text processing may be a bit problematic, since real life texts admit (or incur) amphibolic [ˌæm(p)frɪ'bɒlɪk] expressions like *'fat major's wife'* which may mean both that major is fat or his wife is.

Prof. A.A. Bogatyrev

"Methodology" versus **"Research Design"**

Methodology refers to the principles, procedures, and practices that govern research, whereas *research design* refers to the plan used to examine the question of interest.

"Methodology" should be thought of as encompassing the entire process of conducting research (i.e., planning and conducting the research study, drawing conclusions, and disseminating the findings).

By contrast, **"research design"** refers to the many ways in which research can be conducted to answer the question being asked.

WHAT IS RESEARCH ?

Research [rɪ'sɜ:tʃ] is a systematic investigation to establish facts or principles (or to collect information on a subject).

Syn: investigation , experimentation , testing , analysis , fact-finding , fieldwork , examination , scrutiny etc.

To research – **исследовать**. to carry out investigations into (a subject, problem, etc.)

Syn: investigate , study , enquire into , look into , probe , explore , analyse , examine , scrutinize etc.

Prof. A.A. Bogatyrev

WHAT KIND OF RESEARCH ?

	— научно-исследовательская работа (НИР)
	— независимое, оригинальное исследование
	— детальное, обстоятельное исследование
	— трудоёмкое, напряжённое исследование
	— серьёзное, глубокое исследование
	— прикладное исследование

Prof. A.A. Bogatyrev

WHAT KIND OF RESEARCH ?

research work	— научно-исследовательская работа (НИР)
independent / original research	— независимое, оригинальное исследование
detailed / thorough research	— детальное, обстоятельное исследование
laborious / painstaking research	— трудоёмкое, напряжённое исследование
solid research	— серьёзное, глубокое исследование
applied research	— прикладное исследование

Prof. A.A. Bogatyrev

WHAT KIND OF RESEARCH ?

	— заниматься научно-исследовательской работой
	— проводить исследования
	— исследовать причины заболевания раком
	— Его исследования принесли плоды.

Prof. A.A. Bogatyrev

WHAT KIND OF RESEARCH ?

to be engaged in research	— заниматься научно-исследовательской работой
to conduct / do / pursue research	— проводить исследования
to carry out a research into the causes of cancer	— исследовать причины заболевания раком
His researches have been fruitful.	— Его исследования принесли плоды.

Prof. A.A. Bogatyrev

WHAT IS METHODOLOGY ?

Methodology [ˌmɛθəˈdɒlədʒɪ] (derived from *method* and *logic*)

is the study of structure, logical organization, methods and means of activity;

The methodology of science is the doctrine of the principles of construction, forms and methods of scientific knowledge.

METHODOLOGY and ACTIVITY

Methodology [ˌmɛθəˈdɒlədʒɪ] is the doctrine of the structure, logical organization, methods and means of **activity**. So Methodology at large forms a necessary component of any activity as the latter becomes the subject of awareness, learning and rationalization.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

Methodological knowledge acts in the form of both **prescriptions and norms**, which fix the content and sequence of certain activities (normative M.), and **descriptions** of actually performed activities (descriptive M.).

In both cases, the main function of this knowledge is the internal organization and **regulation** of the process of cognition or practical transformation of an object.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

In modern scientific and methodological discourse, M. is interpreted primarily as M. of scientific knowledge (or research), that is, the doctrine concerning the principles of construction, as well as forms and methods of scientific and cognitive activity.

Prof. A.A. Bogatyrev

Methodology of science gives a description of the components of a research study — its object, subject of analysis, research task (or problem), research tools required to solve a given type of problem, and also forms an idea of the sequence of the researcher's progress in the task-solving process.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

The most important points of application of M. are the **problem statement** (this is where the most frequent methodological errors occur, leading to the advancement of pseudo-problems or significantly complicating the receipt of the result),

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

... the construction of the **subject of research** and the construction of a **scientific theory**, as well **as verification of the results obtained** in terms of its truth, t. e. conformity to the object of study.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

Modern philosophical and methodological studies revealed some important mechanisms for the functioning and development of scientific research and knowledge:

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

- laws of succession of the change of scientific theories (the correspondence principle);
- the presence of a “paradigm” of thinking specific to each era of the development of science (i.e., a set of implicitly defined regulative principles);
- methodological features of artificial languages used in science;

METHODOLOGY and ACTIVITY

- specifics of various types of scientific explanation;
- methods of building scientific theories (deductive, hypothetical-deductive, genetic, etc.),
- characteristics of a number of methodological areas of modern cognition (systems approach, structuralism, cybernetic methods, principles of probabilistic thinking etc.).

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

Since the 1950s. in M. science, problems of generating and **changing knowledge systems** begin to occupy a prominent place.

The Austrian-born British logician [lə'dʒɪf(ə)n] and philosopher K. Sir Karl Popper, (1902-94) tries to explain this process on the basis of the principle of falsification put forward by him, that is, the systematic refutation of existing theories.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

American investigator of history of science
Thomas Samuel Kuhn /ku:n/(1922 –1996)
formulates the concept of the development of
science through **scientific revolutions**, leading
to a radical **change of paradigms** of scientific
thinking.

See: [Structure of Scientific Revolutions.pdf](#)
(Beware! Circa ['s3:kə] 210 pp.!)

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

English (I say '**Hungarian**') mathematician and philosopher Imre Lakatos [UK: /'lækəʊs/, US: /-tʊs/; ['lɒkəʊs 'imrɛ] (1922 –1974) proposed the idea of the development of science based on the foregrounding, advancement [əd'vɑ:n(t)smənt] and implementation of a certain sequence of research programs.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

An important aspect of these and other studies is the broad criticism of the **neopositivist** ideas about M. science and its subject matter for the narrowness of their initial premises ['premisiz]. In this regard, in the works of some Soviet as well as modern Russian and foreign researchers, M.'s concept is developed, based on the principle of activity. The latter one presents M. as a systematic theory of research activity.

METHODOLOGY and ACTIVITY

The development of this concept is accompanied by a criticism of Popper's falsificationism (for one-sided presentation of the process of knowledge development) and Kuhn's concept of SR (for his denial of continuity in the development of knowledge).

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

The special-scientific M., in turn, is divided into several levels:

(1) general scientific methodological concept and direction and (2) M. of individual sciences, methods and techniques of research.

Starting from the 2nd half of the 20th century, the first of these levels (which is far from homogeneous in content) has undergone especially rapid development.

Prof. A.A. Bogatyrev

METHODOLOGY and ACTIVITY

The reasons for its emergence and growth are the **universalization of means of knowledge**, facilitated by this generalized formulation of scientific problems, as well as the **desire for synthesis**, which becomes dominant in the thinking style of modern science.

vowel ['vaʊəl] /

consonant ['kɒn(t)s(ə)nənt]

Kinds of Language Universals

AN ABSOLUTE UNIVERSAL	A STATISTICAL UNIVERSAL
Absolute universals refer to properties found in all languages	statistical universals reflect important trends that are found in a predominant part of the languages of the world, but not necessarily in all.
All languages have vowels and consonants .	Subjects tend strongly to precede objects.

Prof. A.A. Bogatyrev

Kinds of Language Universals

A Language Universal Type	An example
AN IMPLICATIONAL UNIVERSAL	If a language has voiced fricatives, it also has unvoiced fricatives, but not necessarily the other way round.
AN NON-IMPLICATIONAL UNIVERSAL	Present or absent in natural languages without reference to any other properties of the given language.

Prof. A.A. Bogatyrev

There are such universalist theories that directly describe the broad scope of reality from a certain angle, that is, from the standpoint of a certain methodological principle (such as the concept of the **noosphere**, ['nəʊ,sfiə] for example) or **theoretical cybernetics**); universal conceptual systems (such as the **general system theory** of Ludwig von Bertalanffy), aimed at identifying **universal concepts** and categories of scientific thinking through the analysis of the material of science itself. See: [General System Theory 1968.pdf](#)

289 p.

Prof. A.A. Bogatyrev

The **Activity** is a specifically human form of an active relation to the surrounding world, the contents of which constitute its goal-related expedient change and transformation.

The Activity of human implies a certain opposition of the **subject** and the **object** of Activity. So a person opposes to himself an object of Activity as a material that resists the influence of a person and then must get a new form and properties, turning it into product of human Activity.

Prof. A.A. Bogatyrev

Each **Activity** includes:

- (a) the goal,
 - (b) the means,
 - (c) the result
 - (d) and the process of Activity itself,
- and, therefore, an integral characteristic of Activity is its (e) awareness on part of its subject.

Activity is the real driving force of social progress and the condition of the very existence of society.

Prof. A.A. Bogatyrev

As a philosophical principle, the concept of **Activity** was established within German classical philosophy, when a new concept of personality triumphed in European culture, characterized by **rationality, diverse areas of activity** and **initiative**, and the prerequisites were created for considering Activity as the basis and principle of all culture.

Prof. A.A. Bogatyrev
